

**Amendments to the Specification**

(1) Please amend the first paragraph on page 5 as follows:

In one embodiment, the first ligand is an arylheterocycle or a heteroarylheterocycle. In one embodiment, the first ligand is selected from ligands having Formula I or Formula II below.

Formula I

~~Formula II~~

Formula II

wherein:

$R^1$  is the same or different at each occurrence and is selected from H, D,  $C_nH_{2n+1}$ ,  $C_nH_{n-1}$ ,  $OR^2$ ,  $SR^2$ ,  $N(R^2)_2$ , F,  $C_n(H+F)_{2n+1}$ ,  $OC_n(H+F)_{2n+1}$ ,  $OC_nH_{n-1}$ , and  $OCF_2X$ , or adjacent pairs of  $R^1$  can be joined to form a five- or six-membered ring;

$R^2$  is the same or different at each occurrence and is H,  $C_nH_{2n+1}$ , or  $C_n(H+F)_{2n+1}$

A is S or  $NR^2$ ; E is the same or different at each occurrence and is N or  $CR^1$ ;

X is H, Cl, or Br; and

n is an integer from 1 through 20.

(2) Please amend the abstract on page 20 as follows:

~~The invention is a novel~~ A luminescent transition metal organometallic complex composition of matter, a method of preparing this composition of matter, and an electronic device built with this composition of matter. The composition ~~is an organometallic complex comprising~~ includes:

at least one transition metal that produces phosphorescent emission at room temperature,

at least one first monoanionic bidentate ligand coordinated through a nitrogen on a heteroaromatic ring and a carbon, and

at least one second ligand selected from a hydride and a ligand coordinated through a carbon atom which is part of an aromatic group.

~~The electronic device of the invention includes a photoactive layer, electrode and/or an electron transport layer that contains the organometallic complex described above.~~
